PNGOptimizer is an easy-to-use, command-line utility for optimizing PNG image files and converting image files to PNG format. You can use it to reduce the size of PNG files or convert between PNG and other image formats. Key features: * Optimize PNG files to reduce their size * Generate a backup copy of the original PNG files * Convert any image formats to PNG * Command-line interface License Share What's New Version 7.3.6: * Fixed an issue where a background color was not replaced when compressing a PNG image, resulting in a malformed output file. On the 18th April the F.S.F.S.B.s (Foothold Sector Battle Station) have been spotted in a range of star systems. In the Caroum system a F.S.F.S.B.s was located at a planet called 'Tzeyw'. The F.S.F.S.B.s have since moved on to the Kadiz system where they were located at the planet 'Kadiz'. The F.S.F.S.B.s are in a class called 'F.S.F.S.B.s 3A'. F.S.F.S.B.s 3A The F.S.F.S.B.s 3A are built to be very small so that they can be deployed on asteroids and smaller bodies to defend a system. These F.S.F.S.B.s 3A are equipped with 2 x 10MEG missiles and 2 x Tunguska missiles. They can also be fitted with a Soma or laser module. The Soma or laser module is the most powerful weapon module that the F.S.F.S.B.s 3A can carry. The laser module allows the F.S.F.S.B.s 3A to be targeted by Solforge produced lasers. The Tunguska is a missile that can be used to attack any hostile type. F.S.F.S.B.s 3As The F.S.F.S.B.s 3A were deployed at the planet 'Kadiz'.

Portable PngOptimizer is a handy tool for those who want to save some storage space by compressing their image collection, without making compromise on the graphic quality. Additionally, the application can also be used as a picture conversion tool with support for a single output format: PNG. Keep things simple with a forthright interface Aiming to ease your work as much as possible, Portable PngOptimizer features a straightforward GUI, with no buttons or menus to get in your way. Not even an 'open' button is available and the only way you can load new images is to drag and drop them in the main window. As soon as a PNG picture is dropped, Portable PngOptimizer starts analyzing it and initiates the optimization procedure. The original and the final file size are displayed, alongside the compression percentage. The application is set to replace the original files, but you can instruct it to create a backup of them first and save both images in the output location. Optimize PNGs and convert images with ease What Portable PngOptimizer actually does is remove unnecessary elements from the PNG image, so as to reduce its size without affecting the quality. As such, it can eliminate the background color, textual data and physical pixel dimensions and the file date. In the 'Options' window you can specify which items to keep, in case you don't want to erase it all. Despite its name which suggests otherwise, the functionality of Portable PngOptimizer is not limited to compressing PNG files. It also works as an image converter, enabling you to obtain PNG images out of input GIF, BMP and TGA files. Unfortunately, these three file formats are currently the only supported file types. A portable and handy PNG optimization and conversion tool Portable PngOptimizer provides you with a simple and fast way to strip your PNG pictures of information you don't need, so as to reduce their size. It supports animated PNG files as well and thanks to its simple approach, optimizing and converting your images is done in just a few seconds. Furthermore, it is a special version of PngOptimizer that does not require installation, so you can carry it around with you anywhere you go.
