V-Buster is a utility software for Microsoft Windows designed to help people keep their PC safe and clean. It allows users to get a quick and easy-to-use overview of their computer and instantly scans and removes all known malware. If the virus is found in the system, the application gives the user the option to get rid of it. If the test results are clean, V-Buster will give a notification that the task has been completed. V-Buster is a free utility and it is fully compatible with Windows XP, Windows 2000, Windows 2003 and Windows Vista. Using the application is a simple and fun task. It has a well-designed, intuitive interface that makes even a novice user understand it clearly. Nevertheless, it is important to remember that a scan is always better than no scan, as it can reveal suspicious files, however small or hidden they might be. V-Buster is very easy to use. The application is divided into 4 categories which give quick access to all the possible functions that it provides. The main window of V-Buster is divided into 4 smaller windows. The main window displays the information of the scan and its status, like the estimated time of completion, number of files, errors and warnings. The information of the scan and its status is displayed in the main window. Also, other windows will show the results of the scan, like the path of the infected file, the name of the encountered virus, a visualization of the detected virus or the description of the file that was infected. In case a file is infected, the infected file, the path it occupies and the size of the file will be displayed. Also, you can go further into the detailed information of the scan, just by double-clicking on the file in the information window, from which you can access the File Details window. Also, the options are available to perform the full scan, a quick scan, only infected files, only compressed files, only hidden files, only encrypted files, only executable files, only open files and only packages. V-Buster allows you to perform a full scan of the hard disk of the system, it will scan the whole disk and all the folders which are accessible. It will perform the scan by default when the computer starts. You can scan specific partitions such as floppy disks, CDs, optical disks or any other target and the whole process will be performed. If a virus is detected, the application will ask you to remove it or continue the scan.

What's New In?

V-Buster is a powerful antivirus program that can be used to protect your computer against a wide range of Internet threats, including viruses, trojans, spyware, adware and other malware. This is a free antivirus program that allows you to protect your system, your financial data, and your email, against malware and spyware through safe online surfing. V-Buster improves the security of your computer with a quick and powerful scan (either scan files, system, disks or network) of your hard disk or disk partitions. V-Buster uses the latest virus detection technology to protect your PC from malware and spyware programs. V-Buster updates daily (via internet) with a new set of signature files. It also updates automatically when a virus or spyware attack against your PC has been detected. You can scan several disks (floppy, CD, DVD, etc.) without having to remove or reconfigure the antivirus program. If a file is found to be infected, the antivirus software will scan the file and display the full path and name of the

infected file (and even the name of the virus), and display a scan report with the infected file's unique identifier. V-Buster is compatible with Windows 2000, Windows XP, Windows 2003, Windows Vista, Windows 7 and Windows 8. The highly anticipated game from the creators of Kismet! Cybercriminals have evolved. Hacking into your personal information and stealing your money has been as easy as clicking on a link. We can only hope that today's systems are more secure, and the most prevalent viruses aren't as severe as they were a few years ago. However, there are thousands of viruses and malware programs out there with capabilities to cause enormous amounts of damage. You'll play as a hacker trying to blow the whistle on the real culprit who's hacking into the city's financial records. You'll need to scour and scan through the City database in order to complete each mission. You'll need to use hacking strategies, viruses, and adware to compromise the infected systems to get the job done. The security of your personal and financial information is essential, and it's our job to protect you by using the latest technology to stop attacks.
