Q: SqlBulkCopy Using Datalink Utility fails on SQL Server 2012 I am creating an application which has to copy the data from SQL Server to SQL Server. I am using SqlBulkCopy to copy the data. The problem is that it is not able to copy all the data. The copying process is very slow, on the condition that the SqlBulkCopy fails with error message - Incorrect syntax near '@file_cust'. If this is intended as a parameter name it must begin with a letter and contain only alphanumeric characters or '_'. If this is intended as a variable name, must begin with \$ I have tried the solution mentioned here to solve the problem, but it is not working for me. The error is not related to setting the variable name. The Error Message I am getting is related to the format. I am using Microsoft SQL Server 2012 Express Edition. A: 1-You need to use the SqlBulkCopy in the below way. 2-You need to set the Application.AllowCreateOnExecute=false 3-Please call SqlConnection.Open(ConfigurationManager.ConnectionStrings["connstringname"].ConnectionString). And the error message is because that you are passing parameter in the place of the filename. The present invention relates to a control system for a torque converter having a lock-up clutch which converts engine output torque into vehicle output torque at the input side of the torque converter. A lock-up clutch of a torque converter is a friction clutch for directly connecting an engine output shaft to an input shaft at the input side of the torque converter, thereby realizing a direct drive. A lock-up clutch is generally provided to thereby reduce fuel consumption and a torque converter is a power transmission device including the lock-up clutch. When the lock-up clutch is actuated, the engine output torque is directly transmitted to the input shaft, and

Build your markup import with several pre-built or custom vector shapes. Import and incorporate feedback from digital images, or export/edit the existing markup. (video: 1:15 min.) Add your own import vector. With Custom Shape, you can define your own import shape. From imported content, you can create additional import shapes. Each shape can be assigned to specific markers to highlight specific parts of the image. (video: 1:15 min.) Markup Assist is a workflow feature that shows you how you can view and manipulate imported and created markup in a single window. You can also use the stamp pad to quickly add your markups. (video: 1:15 min.) Dimensions: Work with more precise drawing precision. AutoCAD now supports dimensions in measurements or as angles. And you can drag or use the dimension tools with multiple objects. (video: 1:15 min.) Measurements: Work with precise measurements or angles. No more math and no more dimensional prompts. (video: 1:15 min.) Breadth and height: Measure the width and height of more than just a single object. Span multiple objects in a single command. (video: 1:15 min.) Orientation commands: Work with precise angles for sweeping and interpolating objects. (video: 1:15 min.) Text: Access a dictionary of more than 65,000 text styles. You can also apply markers on text. And you can create and edit text box/counters/fills in a few steps. (video: 1:15 min.) Grids: Use the Outliner to get better control over your grids. Goto actions and mouse commands are contextual and quick. And you can use the snap feature to precisely align objects. (video: 1:15 min.) Shapes: Work with a variety of shapes. You can easily create new shapes, edit existing ones, and use existing shape templates. (video: 1:15 min.) 3D Shapes: Create a new 3D model or edit an existing model. And add new 3D measurements or dimensions. Use the snap feature to get better control. (video: 1:15 min.) Tools: Get started faster with immediate 3D tools. Drag a line segment to the model to
