With recent release of AutoCAD 2014, the default color of the graphical user interface (GUI) has changed. You may have noticed the white background with black text on gray. How do you change the color of the GUI to a color of your choice? In this article, we will walk you through the steps to customize the GUI using the current color scheme. The technique is the same for all color schemes. Before you can change the default color, you need to get a copy of the new version of the software from the Internet, or you can just start up a new instance of AutoCAD 2013. 1) In AutoCAD, go to Tools - Options. 2) On the Options page, go to the User Preferences tab. Click the General button. 3) On the User Preferences General tab, you will see the default color scheme for AutoCAD. 4) Click the Color Scheme button. 5) Choose a color scheme from the drop-down menu. Click OK. 6) Close AutoCAD. Note that a few systems may default to a dark gray background. For these systems, the color scheme will be gray, not the default white. Customize the color scheme To change the color of the GUI, right-click the color scheme from the User Preferences color scheme section. You will see a menu item called "Customize Color Scheme". 7) Select the "Customize" tab from the drop-down menu. 8) In the "Fonts and Colors" section, you will see a drop-down menu for choosing the GUI elements. Select the elements to customize. (See Figure A below.) 9) You can choose to change the font, color, background and outline colors, and you can set a font style. 10) Save your customized color scheme, and close the Custom ca3fbf1094
