As this is answered from the following link: you can download the client software from here. Hope this information solves your problem. Where do the miller beans come from? Hulled, processed, dried, and roasted on a conventional mill with a revolving wheel running it through the bean This questions has been asked before, in another thread where I said that my information was obtained by asking mr. fred allin of serrano valley ranch here in oregon. This mill is not in serrano valley ranch, but they operate it. I do not know how to find the names of the miller who process the beans, so i gave the address to mr. fred. I have been to the mill and have tasted beans, I even got the miller to give me a sample of beans, and have analyzed them and was surprised at the results. while you need to verify your information by contacting the miller and ask him what the process is, since he has access to the

mill, the grain is milled to 2.3% moisture and a certain amount of nitrogen added (i would say about 6% as a minimum to get rapid grain growth). From there the beans are air dried in a pan. Then roasted at about 200 degrees. the goal in air drying is to reduce the moisture content to about 18% and keep it there. Typically this is done in a cage or dryer. The beans are then spread onto shaker tables where they continue to dry. At this point, the miller will perform a process known as winnowing, in which the beans are shaken constantly by hand to get the smallest particles out of the dust. Once the beans are dry to the current moisture content, the miller removes the moisture, which can be removed either by evaporating water off in a cauldron or by moving the beans into a hot chamber. This method can be used as long as the temperature of the beans in the hot chamber do not exceed about 250 degrees. The beans are then run through

another mill to concentrate the remaining nitrogen. The mill process is set so that as much nitrogen is removed from the beans as possible. The milling operation can also be done with a top mounted revolving wheel that grinds the beans. The miller will roast the processed beans at
