If you want to edit the layer that is on top, just double-click on the top layer, and Photoshop will bring up the layers dialog. One type of liquid crystal display element is known as a cholesteric liquid crystal display element. In this type of element, the cholesteric liquid crystal is a thermotropic liquid crystal of a helical structure. When an electric field is applied to the cholesteric liquid crystal, the helical structure of the liquid crystal changes, resulting in a state in which various display states are realized in accordance with the magnitude of the electric field applied. Therefore, the liquid crystal display element of this type can provide excellent selective reflection characteristics, that is, having a high contrast ratio. However, the visibility is low in this type of element because the display is in black and white and the reflection of incident light varies in accordance with the state of display. In order to enhance the visibility, it is known to further apply a voltage having a polarity opposite that of the applied voltage to the cholesteric liquid crystal to rotate the helical structure of the liquid crystal 90.degree. or 180.degree.. In this case, the display state can be changed between black and white, for example, depending upon the magnitude of an electric field applied to the cholesteric liquid crystal. However, even when the cholesteric liquid crystal is driven by the applied voltage having a polarity opposite that of the applied voltage as described above, the displayed color is not always changed into a color in the desired color tone. Furthermore, there is a limit in the magnitude of the applied voltage to rotate the helical structure of the liquid crystal.As we compile some positive markers of a good rest period in which we can all sit back and relax for a few days, someone somewhere woke up a couple of days ago and locked up the trade we were obsessing over on a regular basis. After saying "I love you" to the bitcoin price not a whole lot has changed

Q: In document.body.innerHTML get the or tag instead of the whole content? The innerHTML of document.body.innerHTML returns the whole html code of the web page. var wholeHTML = document.body.innerHTML; I want it to return only the or tag. A: Try splitting at the opening tag: var wholeHTML = document.body.innerHTML.split('/); Or: var wholeHTML = document.body.innerHTML.split(//); Or if you want to check only the first occurrence: var wholeHTML = document.body.innerHTML.match(//); Or: var wholeHTML = document.body.innerHTML.split(//).shift(); Note also that calling split on a single string returns an array of strings, not a string. It can be used like this: var wholeHTML = document.body.innerHTML.split('1. Field of the Invention The present invention relates to an electrical connector, and more particularly to an electrical connector with a latching mechanism. 2. Description of the Related Art Universal serial bus (USB) connectors have become increasingly popular for connecting peripheral devices to host computers. A typical USB connector includes a USB port, a PCB and a metal shell. The USB port may be connected to a USB receptacle of a host. The PCB may be connected to a computer and may receive a data transmission signal from the USB port of the host. The metal shell protects the USB port and the PCB. In the conventional designs, the USB

receptacle generally has two metal terminals. A metal terminal covers a plug of the USB port and two metal terminals are aligned when the USB connector is not plugged into the USB receptacle. However, the plug of the USB port is often pressed during insertion
